Is banning surveillance tech worth it?

San Francisco's ban on facial-recognition puts the city at risk of not only falling behind on technological innovation, but returning digital workflows to manual processes, experts say.

State drone operations on the rise

A new survey of state transportation departments highlights the rapid deployment of drone technologies and growing demand for a highly trained workforce required to manage them.

Keeping voting security standards from bureaucracy

Although the security updates to the Election Assistance Commission's new Voluntary Voting System Guidelines 2.0 are sorely needed, its approval and updating process can't keep up with the technological changes.

Harnessing the power of artificial intelligence when disaster strikes

AI-powered tools cut through the noise to help responders access and analyze relevant real-time data more efficiently and respond rapidly to breaking events.

How municipalities can bring their smart city visions to life

Besides identifying how advanced technologies work together for a safer, more comfortable and efficient urban environment, city leaders must also understand the funding mechanisms that can support smart technology investments.

Coding challenge to strengthen emergency response

The Tech to Protect Challenge is designed to boost capabilities of emergency responders with mobile apps, software applications, user interfaces, data systems and more.

June 26th: FCW Workshop

Attend this Data Center Optimization Workshop to hear government experts from GSA, OMB, and more discuss OMB's new guidance to defining data centers. They'll explore new options for energy efficiency, hybrid strategies, and DCOI goals. They'll also address the requirements for infrastructure management and how to assign resources dynamically through virtualization.
